WATERTRONICS®

WATERVISION 2.0
ADVANCED CLOUD TELEMETRY

STAY CONNECTED

Stay connected and in control of your pump station with WaterVision® 2.0. This next generation of advanced cloud telemetry give users the same control on a mobile device as they have at the station to monitor and make full system adjustments like set points, safeties, and alarm resets. Generate water usage reports and diagnostic charts for better water management. View status of key station equipment in one spot on the WaterVision dashboard.

POWERFUL REMOTE OPERATION
Control and monitor your pump network quickly and easily from any web enabled device.

RETROFIT CAPABILITIES
Installs on any existing pump system regardless of station brand.

DYNAMIC INTEGRATION
Watertronics® Pump-Link® integrates your pump station with Rain Bird® or Toro® golf irrigation central controls.

USER ACCESS
Individual log in access levels for secure multi-user use.

MAXIMUM SYSTEM UPTIME
Receive safety and alarm notifications via text or email to make system adjustments, including resets, remotely and reduce the risk of unplanned downtime.

POWER USAGE
Optimize wire-to-water efficiency by monitoring and trending power consumption and the quality of incoming power.

LABOR REDUCTION
Save time and labor by eliminating costly site visits to each pump location.

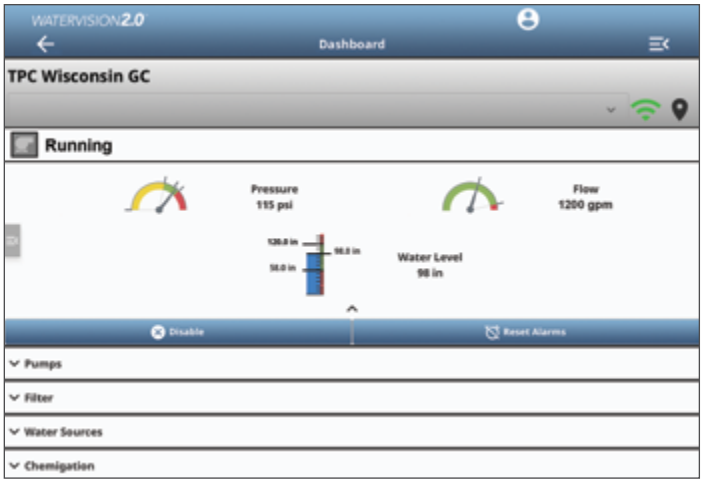
STORE & FORWARD
Stores program activity if power is lost and forwards once power/ internet is restored.

WATERVISION2.0™
ADVANCED CLOUD TELEMETRY

MONITOR & CONTROL ANYWHERE

With complete mobile responsiveness and equal system control from station to device, you never have to worry about being away from the pump station.

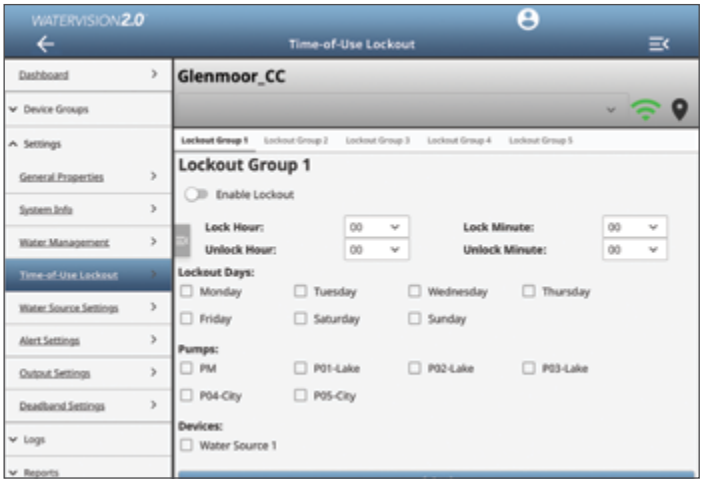
SMARTER PUMP MANAGEMENT MADE EASY



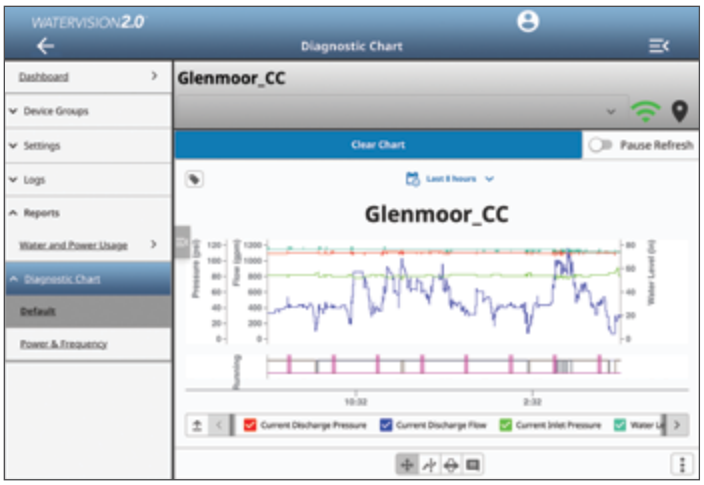
Dashboard shows key information in one spot

View network of pumps including status icons

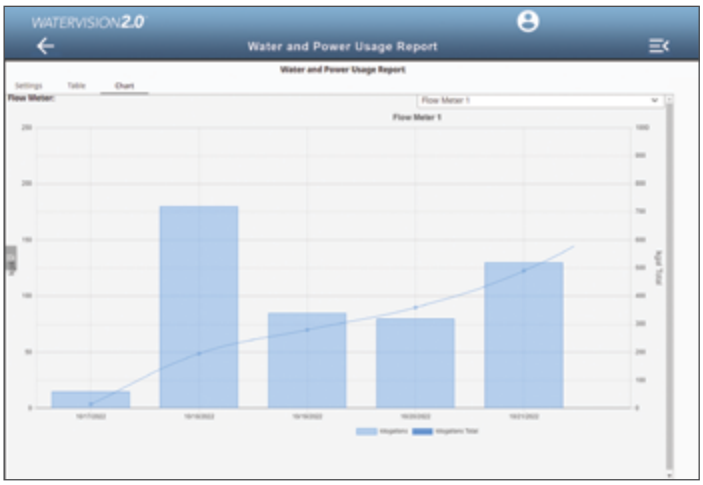
Water source settings



Time of use lockout



Run custom reports to monitor pump performance

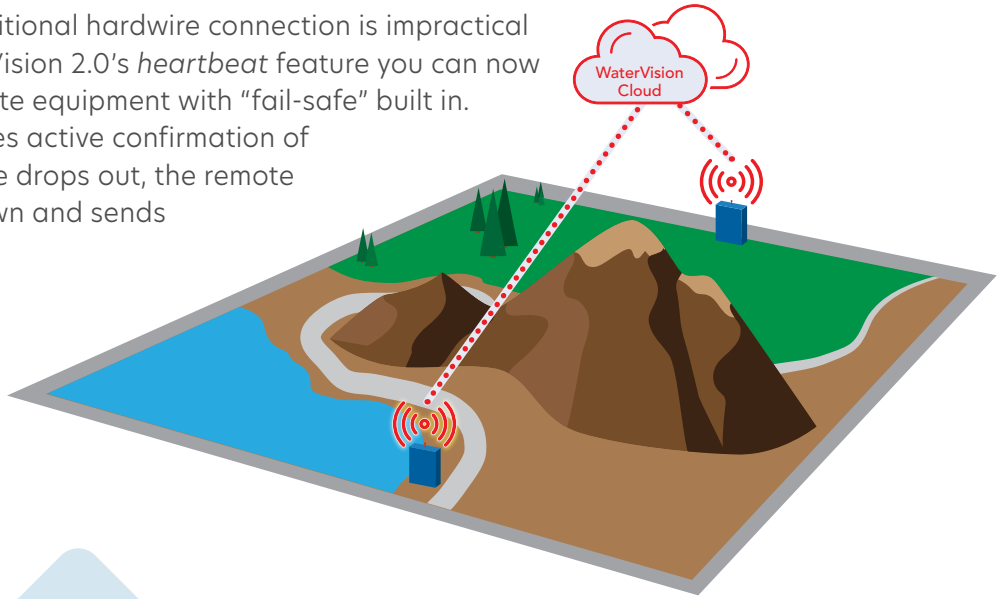


Build water usage summaries to meet compliance requirements

CLOUD DEVICE COMMUNICATION

Radios are often unreliable and traditional hardwire connection is impractical for great distances. With the WaterVision 2.0's *heartbeat* feature you can now remotely monitor and control separate equipment with "fail-safe" built in. Our unique cloud technology provides active confirmation of internet communication. If the service drops out, the remote device recognizes the loss, shuts down and sends a fault alert.

- No radios or hardwire
- Ideal for situations without line of site



WATERVISION2.0™ Gateway

Easily upgrade any current Watertronics system to WaterVision 2.0 via the Gateway conversion kit. Installed in minimal time by a Pump Service Network service provider, the Gateway kit converts both Sigma PLC controllers and existing 3G WaterVision systems to WaterVision 2.0 platform.
